Slide 1 Title

GLOBAL STREAMING STRATEGIES

Good morning everyone.

My presentation is titled “Global Streaming Strategies: A Comparative Analysis of Netflix, Disney and Amazon Prime Video in the US and India.”

In this presentation, I will examine how these three international streaming businesses respond to differences between the US and Indian markets.

The main focus is the tension between global integration and local responsiveness. In other words, how can a company maintain the advantages of being a global platform while also adapting to local culture, consumer behaviour and market conditions?

I will compare Netflix, Disney and Amazon Prime Video using international business theories and evidence across four main themes.

Slide 2 Introduction

Global competition, cultural differences, consumer behaviour, regulation and ethics

The international streaming industry is highly competitive, but competing internationally is not simply about making the same service available in different countries.

Companies also have to respond to cultural differences, consumer behaviour, regulation and ethical expectations.

This leads to my research question:

How do Netflix, Disney and Amazon Prime Video balance global integration and local responsiveness in the US and India?

My central argument is that international success requires a balance between these two pressures.

On one side, companies benefit from global technology, scale, international distribution and global brands.

On the other side, they need to adapt to local content preferences, languages, consumer expectations, partnerships and regulations.

This global-versus-local tension provides the basis for the comparison throughout the presentation.

Slide 3 Three Global Streaming Businesses

Netflix, Disney and Amazon Prime Video

Before comparing their strategies, it is important to recognise that these companies do not have identical business models.

Netflix is primarily a global streaming business. Its international approach combines local stories and content with global distribution.

Disney has a broader entertainment and intellectual-property ecosystem. Its strategy combines globally recognised intellectual property with local strategic partnerships.

Amazon Prime Video is different again because streaming forms part of Amazon's wider ecosystem. Its approach combines local content with broader ecosystem integration.

The two markets also present different conditions.

The US is a mature and highly competitive streaming environment, while India is a large and diverse market with particularly strong demand for local and regional-language content.

Therefore, the same international strategy cannot necessarily be applied in exactly the same way in both markets.

Slide 4 Analytical Framework

Four theoretical themes

I use four main analytical themes in this presentation.

First is national culture, using Hofstede and Hall. This helps us consider differences in cultural values and communication patterns between the US and India.

Second is social norms and consumer behaviour, using Social Identity Theory alongside consumer behaviour concepts. This helps explain why language, identity,

social context and consumption patterns can affect the way streaming services adapt.

Third is business ethics and regulation. Here I use Stakeholder Theory and Carroll's Corporate Social Responsibility framework to consider the different interests and responsibilities that international streaming companies face.

Finally, I use Bartlett and Ghoshal's integration-responsiveness perspective to examine the broader international strategy.

So throughout the presentation, the basic analytical sequence is:

external environment, company response, and then strategic implications.

Slide 5 National Culture: US vs India

Theme 1

The first theme is national culture.

Using Hofstede and Hall as broad analytical frameworks, the US can be characterised by relatively high individualism, lower power distance and more direct communication.

India, by comparison, is generally characterised by stronger collectivist tendencies, higher power distance and more high-context communication. India also has a much more diverse linguistic environment.

However, it is important not to treat these theories as fixed descriptions of every individual.

Culture can influence communication, content preferences and localisation decisions, but it does not determine individual behaviour.

For these companies, the important strategic point is that cultural and linguistic differences create potential pressure for adaptation.

Therefore, international streaming companies need to consider how global content and communication can be made relevant within different local environments.

Slide 6 Culture & Localisation

Comparative response

This slide connects the cultural discussion directly to the three companies.

All three companies invest in local stories or content, regional languages and local creative relationships.

This suggests that localisation is not simply a Netflix strategy. It is an important response used across international streaming.

However, the companies differ in how they combine localisation with their wider business models.

Netflix emphasises content localisation combined with global distribution.

Disney combines its global intellectual property with local strategic partnerships, including its Indian partnership structure.

Amazon combines local content with its wider ecosystem.

So there is a common need for local responsiveness, but the way that responsiveness is implemented differs because the underlying business models are different.

This is an important distinction between having the same market and having the same international strategy.

Slide 7 Social Norms & Consumer Behaviour

Theme 2

The second theme is social norms and consumer behaviour.

International streaming companies need to understand not only what audiences watch, but also how and why they watch.

Four relevant factors are shown here.

The first is device and mobile use.

The second is language and regional identity, which is particularly important in a linguistically diverse market such as India.

The third is social and family context, because viewing can take place within different social environments.

And the fourth is price sensitivity, which affects how consumers evaluate the value of a streaming subscription.

This means localisation is more than simply translating a platform into another language.

The companies need to understand the social and consumer environment surrounding content consumption.

Social identity is also relevant because people can connect with content that reflects their language, region or cultural identity.

Slide 8 Consumer Adaptation

Response Matrix

This matrix shows how those consumer considerations translate into company responses.

Again, all three companies use local and regional content, multiple languages and local creative relationships.

But there are important differences.

Netflix's distinctive response in this presentation is its emphasis on local content that can also reach a global audience.

Disney's distinctive response is its local strategic structure, particularly its partnership or joint-venture approach in India.

Amazon Prime Video has a distinctive advantage through wider ecosystem integration.

So the same consumer environment can lead to different strategic responses.

The reason is not simply cultural difference. It is also because the companies possess different resources, capabilities and business models.

Therefore, localisation should be understood as a strategic choice rather than as a single standard formula.

Slide 9 Business Ethics & Regulation

Theme 3

The third theme is business ethics and regulation.

As these companies expand internationally, they have to manage relationships with several stakeholder groups.

The first is consumers. Relevant issues include privacy, personalisation and responsibility for content.

The second is governments, which creates requirements around regulation, compliance and content.

The third group is creators and rights holders. Issues here include copyright, ownership and fair relationships.

Finally, companies have responsibilities towards society, including cultural sensitivity, representation and broader social responsibility.

Stakeholder Theory is useful here because it shows that international strategy is not only about satisfying shareholders or maximising market growth.

Carroll's CSR framework also helps us consider broader corporate responsibilities.

As companies enter different markets, these stakeholder expectations can become more complex because the regulatory and cultural environments are not identical.

Slide 10 Global Integration vs Local Responsiveness

Theme 4

The fourth theme brings the previous analysis together using the integration-responsiveness perspective of Bartlett and Ghoshal.

Global integration provides advantages such as global technology, platform scale, economies of scale, global brands and international distribution.

However, companies also face pressure for local responsiveness.

That includes local content, regional languages, local market conditions, partnerships and regulatory adaptation.

The strategic challenge is therefore not simply choosing global or local.

It is about managing the tension between the two.

A company needs enough global integration to benefit from scale, but enough local responsiveness to remain relevant in different markets.

The important point here is that I am not ranking the three companies.

Instead, I am comparing how each company manages this global-local tension.

Slide 11 Different International Strategies

Strategy comparison

This slide summarises the different strategic responses.

For Netflix, the central relationship is local stories and a global audience.

Netflix can work with local creators and regional languages while using its global distribution platform to potentially take that content beyond its original market.

For Disney, the relationship is global intellectual property and local strategic structure.

Disney can maintain globally recognised franchises while using local partnerships and structures to respond to the Indian market.

For Amazon Prime Video, the relationship is content and the wider ecosystem.

It combines local and global content with Amazon's broader technology and ecosystem capabilities.

Therefore, the companies face similar international pressures but respond differently because their capabilities and business models differ.

This demonstrates why international business strategy cannot be separated from the resources and structure of the company.

Slide 12 Comparative Evaluation

Synthesis

Looking across the three companies, there are several important similarities.

All three operate global digital platforms, invest in local content, use technology-driven distribution and face strong international competition.

However, there are also significant differences.

Their business models are different.

Their partnership structures are different.

Their levels of ecosystem integration are different.

And their strategic emphasis is different.

They also face common challenges, including high content costs, regulatory complexity, cultural differences and intense competition.

At the same time, international expansion creates opportunities through regional content, local creative partnerships, emerging consumers and cross-border distribution.

The key strategic implication is that internationalisation is not a one-time localisation exercise.

Companies need to continuously adapt as markets, consumer behaviour and competitive conditions change.

Slide 13 Performance Evidence

Different measures of international performance

The next question is whether these strategies are reflected in performance.

For Netflix, the presentation reports 2024 revenue of 39 billion dollars, operating profit of 10.4 billion dollars and an operating margin of 26.7 percent.

For Disney, the presentation reports FY2025 direct-to-consumer revenue of 24.6 billion dollars, with DTC operating income increasing to 1.327 billion dollars, compared with 143 million dollars in FY2024.

Amazon is different because it does not separately report Prime Video revenue in the same way.

Therefore, this presentation uses audience evidence instead.

For example, Panchayat Season 4 reached 95 percent of Indian pin codes during its launch week and reached viewers across more than 180 countries and territories.

The wider point is that international performance cannot always be compared using exactly the same financial measure.

For Netflix and Disney, financial indicators are available, while Amazon's Prime Video performance is illustrated through audience and content evidence.

This suggests that international strategy can be reflected not only in financial performance but also in the international reach of locally produced content.

Slide 14 Conclusion

Global ↔ Local

To conclude, the main argument of this presentation is that global scale alone is not enough for successful internationalisation.

Netflix demonstrates a combination of local content and a global platform.

Disney combines global intellectual property with local strategic partnerships.

Amazon Prime Video combines content with a wider ecosystem.

Across all three companies, culture, consumer behaviour and institutional conditions influence international strategy.

However, the companies do not respond to these conditions in exactly the same way because their business models and capabilities differ.

Therefore, the central strategic challenge is to balance global integration with local responsiveness.

International streaming businesses need the scale and consistency of global operations while remaining sufficiently responsive to local markets.

That balance is the central theme connecting the four areas of analysis in this presentation.

Thank you.

Slide 15 References

These are the main academic and company sources used throughout the presentation, including the work of Bartlett and Ghoshal, Hofstede, Hall, Freeman, Carroll, and the company sources from Netflix, Disney and Amazon.

All sources are presented using the Harvard referencing system.

Slide 16 References Continued

And these are the remaining references used to support the analysis and evidence presented.

Thank you for listening. I am happy to answer any questions.
